

Latest updates from Val Controls

In this edition, we share key product updates, including a simplified IDC24 range, the release of ILB24 version 3.0, and recent project deliveries.

IDC24-A(F) - fewer product variants and same functionality

We have significantly reduced the number of variants in the IDC24-A(F) range while maintaining full functionality.

This is part of our ongoing effort to make it easier for our customers to select the right Val Controls products for their valve assembly.

The update is enabled by new SIL boards developed and produced by Val Controls, replacing several previous variants.

ILB24, Line Break Controller – Version 3.0

Version 3.0 of the ILB24 Line Break Controller is now available, featuring new configuration software.

The updated software provides a more intuitive setup and simplifies configuration of line break detection and system parameters.

IDC24 Controllers for Lower Zakum Project

Val Controls is proud to have been awarded the partial stroke testing package for hydraulically actuated valves for the Lower Zakum project in the UAE.

As an approved supplier to ADNOC, one of our key end users, this project represents an important milestone for Val Controls.

- Application: Partial Stroke Testing of ESD Valves
- Destination: Abu Dhabi
- Model: IDC24-AFL

Notable deliveries in Q1-2026

A selection of notable deliveries in the past quarter.

Diagnostic Controllers at Pipeline ESD Stations

- Application: Partial Stroke Testing of ESD Valves
- Destination: Argentina
- Model: IDC24-CF

Positioners for Gas Field

- Application: Modulating Choke Valves
- Destination: Algeria
- Model: IHP24-AF

Partial Stroke Testing for ESD Valves in Carbon Capture and Storage

- Application: Partial Stroke Testing ESD Valves
- Destination: United Kingdom
- Model: IDC24-AF

Line Break Controllers for New Pipeline Construction

- Application: Pipeline Control and Monitoring
- Destination: Iraq
- Model: ILB24-AFL
