VAL CONTROLS
Intelligent Valve Control

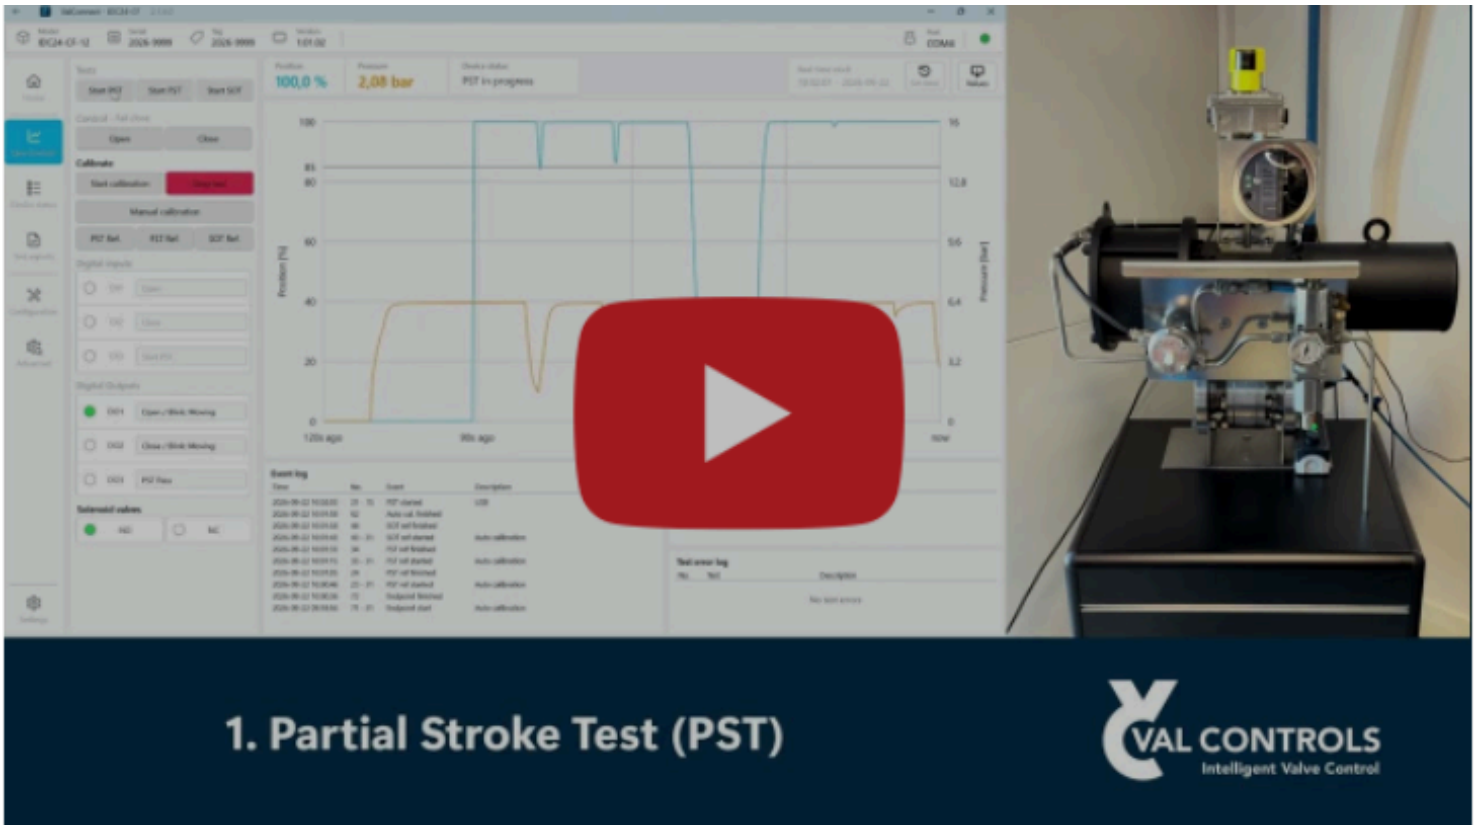
Q3-2026 update

Latest updates from Val Controls

This quarter, we have delivered products to customers around the world, including Argentina, Congo and Vietnam.

We would also like to highlight the new and improved test reporting functionality in ValConnect. We believe it adds value for users across our product range by reducing the need for manual testing and documentation of valve assemblies during FAT.

Finally, we take a closer look at the increasing demand for our products in FPSO applications and the growing number of project references behind it.



Improved test reporting in ValConnect

We have upgraded the test reporting functionality in ValConnect, making it easier to document valve performance and reducing the time spent on manual documentation.

Depending on the product, relevant valve data is automatically included in a clear test report that can be saved and shared with your customer.

The functionality is available across our product range. In this video, we use the IDC24-CF as an example.

Growing demand for our products in FPSO projects

We are seeing increasing demand for Val Controls products in FPSO applications, with our products being selected for a growing number of projects worldwide.

FPSO applications place high demands on valve control equipment. Reliability is especially important offshore, where maintenance can be challenging, while compact valve assemblies often leave limited space for instrumentation. Our compact, Ex-certified products are developed for these operating conditions.

Our FPSO offering includes diagnostic controllers for ESD and turret valves, as well as positioners for modulating and choke valves.

We now have references from 10 FPSO projects for operators including ExxonMobil, Shell, Petrobras, Equinor, Woodside and TotalEnergies. This growing installed base is contributing to increased interest in our products for new FPSO projects.

See our FPSO products and project references in the leaflet

Notable deliveries in Q2-2026

A selection of notable deliveries in the past quarter.

Positioners for hydraulic application

- Application: Modulating control valves
- Destination: Trident Energy - Congo
- Model: IHP24-BF

Positioners for hydraulic application

- Application: Modulating control valves
- Destination: Sail Bokar Steel Industry - India
- Model: IHP24-BF

Line Breakers for pipeline application

- Application: Line break control and monitoring
- Destination: Pan America Pipeline - Argentina
- Model: ILB24-AF

Diagnostic Controllers for hydraulic application

- Application: Partial Stroke Testing hydraulic SD valves
- Destination: HIPPS Budour Salalah Pipeline - Oman
- Model: IDC24-AF

Diagnostic Controllers for hydraulic application

- Application: Partial Stroke Testing hydraulic SD valves
- Destination: HIPPS DAM DOI Field - Vietnam
- Model: IDC24-AF
